CurveX Oven Loggers and Accessories
TQC SHEEN, DEVELOPERS AND MANUFACTURERS OF PAINT TEST EQUIPMENT

TQC Sheen designs and produces field measuring instruments and lab equipment for testing paint and coatings and general surface treatment.

Production facility
TQC Sheen's objective is to create and offer solutions for every possible QC-application in surface technology. TQC Sheen products are known for their ergonomic features and user friendliness. The production facility is located in The Netherlands. In order to complete the TQC Sheen range the company works closely together with renowned manufacturers from all over the world.

Global distribution
TQC Sheen has offices in the Netherlands, Germany, Italy, United Kingdom, Norway, Korea, China, Singapore and North America, and works closely together with a global network of distributors in more than 60 countries. The TQC Sheen product range focuses mainly on three different market sectors; Paint Research and Development Laboratories and Quality Control, Protective and Marine Coatings Applications, Surface Finishing Industry.

History and innovation
In October 2017 TQC BV. has acquired Sheen Instruments LTD. Sheen Instruments has a history of over 70 years being manufacturers of laboratory equipment for the paint industry. TQC is a manufacturer of paint test equipment renowned for their innovative approach and groundbreaking developments.

Both companies are joining forces now and the two brands are being merged in the new TQC Sheen label. The new name represents the best of both worlds: Innovation & History.

Decimal Mark

In this booklet we have striven to use the , as decimal mark for metric values/SI units. Imperial values have a . as decimal mark, based on the US system.

TQC ThermoKinetics

The TQC Sheen ThermoKinetics range is a new range within the product line. The TQC Sheen ThermoKinetics range focuses on the effect of temperature on paint related chemistry.

Calibration certificate included

Ideal Finish Analysis Ready
CurveX 3 Standard Oven Logger
With Ideal Finish Analysis (Oem)

The CurveX 3 Standard offers easy-to-use, high quality temperature data logging for paint curing ovens. Measurements, analysis levels and report options are fully customizable to provide you with tailor-made information on the quality of your curing processes. The data logger is fitted with a large full-colour touchscreen for easy menu-driven operation and quick display of measurement results. The logger has 6 channels and a memory of at least 8000 measuring points per channel.

Ideal Finish Analysis data analysis software allows you to analyze the logged data and create detailed reports. These advanced features, together with a wide range of display and printing options, makes CurveX 3 Standard the most flexible temperature data logging solution available, excellently suited for both field use and laboratory conditions.

Features

- Easy-to-use
- Large full-colour touchscreen
- Menu-driven operation
- High quality temperature data-logging
- Measurements, analysis levels and report options fully customizable

CurveX 3 Standard Oven Logger Kit

Profiling an industrial powder coating oven starts right here with the CurveX 3 Standard Oven Logger KIT. It contains all necessary items, just add the desired magnetic or clamp-type probes to make the oven logger KIT complete.

The heart of the KIT is the CurveX 3 Standard Oven datalogger which offers easy-to-use, high quality temperature data logging for paint curing ovens. Measurements, analysis levels and report options are fully customizable to provide you with tailor-made information on the quality of your curing processes. The data logger is fitted with a large full-colour touchscreen for easy menu-driven operation and quick display of measurement results. The logger has 6 channels and a total memory of 250000 measuring points.

Ideal Finish Analysis data analysis software allows you to analyze the logged data and create detailed reports. These advanced features, together with a wide range of display and printing options, makes CurveX 3 Standard the most flexible temperature data logging solution available, excellently suited for both field use and laboratory conditions.

CurveX 3 Basic Oven Logger Kit

Profiling an industrial powder coating oven starts right here with the CurveX 3 Basic oven logger KIT. It contains all necessary items, just add the desired magnetic or clamp-type probes to make the oven logger KIT complete. The CurveX 3 Basic oven data logger that offers easy-to-use, high quality temperature logging for industrial paint and powder coat cure ovens. The oven data tracker is fitted with three large buttons for easy operation and three LED giving power, paint type, logging and cure information.

The main component of the KIT is the CurveX 3 Basic an oven temperature data logger that allows the conditions in the oven to be monitored regularly for each substrate. The oven temperature data logger is placed in an insulated box and as it passes through the oven with the work piece and it can measure the temperature in several places on the surface of the product simultaneously. Several probes for measuring the ambient temperature and the temperature of the product can be connected to the data logger. These include magnet, clamp, ring-type and wire probes. In addition to the most common temperature probes, special infrared probes can also be used. The measurements are to a PC via the oven temperature data logger’s USB port and analysed using the Ideal Finish software program.

The included Ideal Finish Analysis software allows you to analyse the logged temperature data and create detailed reports. Advanced oven profiling features like cure data analysis, ideal cure and tolerance bands, together with a wide range of display, report and printing options, make CurveX 3 Basic oven logger the most flexible temperature logging solution available.

Excellent suitability for industrial oven and laboratory oven temperature profiling. Mandatory test in Qualicoat, QIB and GSB accredited laboratories.

Features
- KIT configured to start oven temperature data logging in paint and powder coating curing oven applications, just add your probes to make it complete.
- Insulation box with degassed silicone materials suitable for powder coating applications.
- For absolutely silicone free or high temperature applications select your insulation box.
- Document and prove process quality following Qualicoat, GSB, ISO9000, QIB etc. and create outstanding quality reports with the included advanced analysis software.

CX3010
CurveX 3 Basic Oven Logger

Scope of supply
CurveX 3 USB Oven Logger with Ideal Finish Analysis Software, Factory calibrated, calibration certificate included, Ideal Finish Analysis License Key, USB cable, small protective case.

Features
- Operate through only 3 large buttons
- Meaningful feedback of multi coloured LED’s
- Factory calibrated for immediate use
- Downloads data through a standard USB port
- Rechargeable battery pack through USB connector
- Large memory of max. 160,000 readings
- Memory for 10 different batches, automatically overwrites the oldest results
- Programmable “paint type” memory for immediate “pass / fail” result
- Flat design, only 16 mm, for use in low clearance ovens
- Compatible with Ideal Finish Analysis software

Technical Specifications CurveX 3 Basic Oven Logger Kit
- Measuring range: 0°C to +500°C / -58°F to +932°F
- Operating temperature: -20°C to 60°C / -4°F to 140°F
- Accuracy: +/-1°C / 1.8°F
- Channels: 4
- Sample interval time: 1s to 60 min
- Memory: 10 batches with 16,000, or 1 batch with 160,000 readings
- Display: Three multi-colour LED’s
- Interface: USB
- Housing material: Aluminium
- Dimensions (D x W x H): 100x85x16 mm / 3.94x3.35x0.63 inch
- Power supply: rechargeable battery
- Battery life time: 1200 hour continuous use, 27 years in stand-by
- Weight: 190 g / 6.7 oz

Insulation Boxes For CurveX

CurveX insulation boxes are specifically designed to protect the CurveX loggers against the harsh environment in industrial ovens. All insulation boxes are made of a polished stainless steel outer box filled with micro porous insulation material to prevent the oven heat to penetrate the aluminium inner box. Inside the aluminium inner box a high density media heat sink collects any excess of heat and keeps the CurveX logger at an acceptable operating temperature for a long period of time. The heat sink thermo energy collecting capacity can be restored by cooling it down after use. This physical process is endless and does not require exchange of the heat sink after a certain period of time.

Features

- Excellent logger protection against oven heat.
- Ferro plate for holding the magnet probes when not in use.
- Mounted cable hook allows the storage of surplus cable length.

Technical Specifications Insulation Boxes for CurveX

Outer box material: Polished Stainless steel
Insulation material: Micro porous silica
Inner box material: Anodised aluminium

The TQC Sheen ThermoKinetics range is a new range within TQC Sheen's product line. The TQC Sheen ThermoKinetics range focuses on the effect of temperature on paint related chemistry.

* Tested in combination with the energy absorber CX2011 (a high density energy-collecting media) with a start temperature of 20°C (68°F).
Temperature Probes For CurveX

CurveX temperature probes are specifically designed to measure oven air temperature and the part surface temperature in an oven. All probes are made of premium grade thermo couple K wire, which guarantees the highest accuracy available. High class magnet and springs are used that do not disintegrate or lose force at high temperatures. The various probe types allow measuring on every part regardless of its shape or size.

Technical Specifications Temperature Probes for CurveX

| Probe type: Thermo couple K | Temp Range: -40 to 375°C / -40 to 707°F |
| Connector: K type miniature plug | Tolerance Value: -40 to ±1.5°C / -40 to ±34.7°F |
| Material: Nickel-Aluminium Nickel-Chromium | Temp Range: 375 to 1000°C / 707 to 1832°C |
| Accuracy: Class I Premium grade | Tolerance Value: ±0.4% Reading / ±0.4% Reading |

Case Study CurveX System

AGA Rangemaster is a leading international premium consumer which manufactures and distributes some of the best known and loved kitchen appliances and interiors furnishings in the world. Lately they experienced a problem with colour match on one of their enamels.

The Speedometer of the Oven
The CurveX system gives the necessary information on the activities inside the furnace. With the information gathered by the CurveX Datalogger combined with Ideal Finish Analysis software adjustments can be made and money saved.

“We have used it already 50 times to study and balance our furnace. We have before and after curves where we have adjusted a 20 degree difference between the top and bottom of our furnace to 6 degrees, but also evened out cure index and time at temperature, we have found the software very useful for comparing data. We made adjustment to the burners to change the flame lengths to overcome this problem.”

Besides changing the temperature and time AGA Rangemaster found out that if the furnace was heavily loaded the temperature curve was affected. This problem was gone un-noticed until they used the CurveX system.

“We are now more self sufficient on setting the furnace burners and much better understanding of the things that can affect the furnace balance. Even to the point where we have calculated the Kg of enamel ware that the furnace can cope with from the Joules available in the gas input. We could reduce our track rate slightly to ensure we never had a net loss of energy input to load but have at the moment not made a decision, as it is only under certain circumstance now that the load can exceed the gas.”

Now the issue is resolved they will use the datalogger once a week to check the furnace is not drifting back to where they had a problem.
**Ideal Finish Analysis Software**

The TQC Sheen Ideal Finish Analysis Software is the most advanced coating climate, coating cure and coating thickness monitoring software package available today. With two user levels Ideal Finish Analysis offers user friendly reporting functions for standard production work as well as advanced calculations for in depth analysis of the climate parameters prior to coating, the curing process and oven performance during coating and the thickness after coating. Detailed graphic representations and customizable reports help you to make the right decisions to optimize your production process.

Ideal Finish Analysis is updated frequently to keep up with the latest developments in the coating and corrosion prevention industry and to comply with new operating systems like Windows 7 and Windows 8. The latest version of the software is available for free on our website http://www.tqcsheen.com

**Features**

- Windows feel and look
- Integrated context sensitive help
- Easy user settings and download wizards
- Advanced reporting functionality
- 20+ pre-defined calculation on results
- Data export to Excel
- Various graphs and statistics analysis
- Extended’s to Visual Basic for Applications
- Advanced reporting in Word and Excel
The temperature of the different areas of curing ovens can be separately adjusted. However, it is not easy to identify whether the temperature of the product itself and the exposure time will produce the desired results. In the case of powder coatings, if the curing time is too short or the temperature too low, the coating will not crosslink properly. Other results include orange peel and a lack of adhesion, because the powder crystals have not fused effectively. In the case of paints, under baking leads to poor distribution and cross-linking. Over baking can cause unwanted flow and lack of adhesion or even the disintegration of the coating.

The TQC Sheen Ideal Finish Analysis License Key is free of charge for everyone who purchased one of the Supported Instruments listed above at TQC Sheen or through one of TQC Sheen's distributors.
